91% of our sustainable finance assets are in emerging markets and 86% is in some of the world’s least developed nations.

We supported 1.3 million people through microfinance and provided over 20,000 SME loans to emerging markets.

In Zambia, a water facility we financed will provide clean water to 1.7 million people.

We also financed the construction of a hospital in Zambia, with 433 new beds and a nursing school for 240 future health workers and 102 medical workers.

We have financed solar projects in India which will avoid over seven times the CO2 emissions compared to a similar-sized project in France.

Our green portfolio helped avoid 739,998 tonnes of CO2 last year.

A sustainable recovery requires the finance sector to recognise that impact matters just as much as volume. To finance change, we need to catalyse, standardise and democratise sustainable finance.
