

Weekly Market View

More signs of a sustained upturn

November is turning out to be one of the strongest months ever for risk assets as more event risk hurdles are crossed. We believe this is the start of the next leg of the uptrend, near-term challenges notwithstanding, as science, politics and policy converge to revive the global economy

Equities: Banking sector equities have broken higher in the US and Europe as bond yields rose. Resumption of dividends and still higher bond yields are key to sustaining the rally

Bonds: Although Treasury yields have rebounded from record lows, we expect the Fed to cap further significant gains

FX: The broad USD index is testing a key support. A sustained EUR/USD break above 1.20 will be needed for the USD to decisively break lower

Editorial

More signs of a sustained upturn

November is turning out to be one of the strongest months ever for stocks, commodities and other cyclical assets. We believe this is the start of the next leg of the uptrend, near-term challenges notwithstanding, as science, politics and policies converge to revive the global economy from the deepest recession in a century.

The latest rally, which started around Biden's election in early November, got a shot in the arm from surprisingly strong results from COVID-19 vaccine trials. This week, President Trump implicitly acknowledged Biden's victory by directing his administration to start the handover process, removing a key hurdle to the transition process. Meanwhile, two leading vaccine candidates are seeking emergency regulatory approvals in the US, Europe and other developed countries. There is a rising chance that at least one will get the go-ahead before the year-end, enabling public vaccinations – initially to frontline healthcare workers and the most vulnerable – to start within days of approval. That is a far cry from a month ago, when forecasters gave less than a 50% chance of a vaccine rollout by the end of March 2021 (based on Good Judgment Inc).

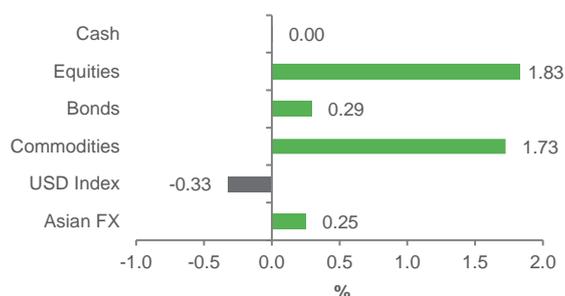

The brightening outlook is reflected in the rebound in cyclical assets such as US and European banking, energy and materials sectors, a sustained rise in oil prices and further downward pressure on EM and HY corporate bond yield premiums, the USD and gold.

On pages 4-6, we examine other factors that would help the banking sector equities rally to extend. A key catalyst would be a consistent rise in bond yields, a factor which appears remote at this stage. Indeed, we expect major central banks to weigh against rising bond yields. The ECB has already signalled more accommodative policy is likely at its December meeting. Meanwhile, Biden's pick of former Fed Chair Yellen as his Treasury Secretary sends a signal that the US Treasury and the Fed are likely to move in lockstep to ensure bond yields do not rise significantly as a result of rising government bond sales. This also suggests that the USD is likely to trend lower, once it has broken a key support (see page 5), and that gold will be supported (page 6).

In the very near term, however, all eyes are on rising hospitalisations and fatality rates in the US amid a COVID-19 resurgence and US state authorities' plans to tackle it. Europe, meanwhile, has started to relax restrictions after daily new cases showed signs of having peaked.

Equities and commodities extended gains and the USD fell amid rising expectations of an early vaccine rollout

Top client questions

Q What is driving the rally in Euro area banks?

The Euro area banks sector is up 40% since the start of November. We believe this has been driven by three factors:

- 1) Higher bond yields
- 2) Expectations for a resumption in dividend payments
- 3) A recent rotation into value style equities

The increase in Euro area government bond yields accelerated following the announcement of high effectiveness rates in three COVID-19 vaccine candidates. The likelihood of mass vaccinations starting in 2021 has raised expectations of an economic recovery and, in turn, has pushed yields higher.

European regulators took the lead in advising banks to postpone dividends in 2020 and focus on building up provisions against non-performing loans. As Euro area financials are the single largest source of dividends for the equity market, their suspension contributed to the slump in financial sector performance. While regulators in the US and Asia followed suit, they tended to opt for dividend caps or suspension of buy-back, as opposed to suspensions of dividends.

Looking ahead, there is growing optimism that European regulators will lift the dividend suspension and may even allow dividends that were set aside, but not paid in 2020, to be paid out to shareholders.

The rotation into value sectors in the Euro area is benefiting the financial sector, which, along with healthcare and utilities, is a primary value-style sector in the market. The sector rotation trend is likely to continue if government bond yields trend higher, though as we note elsewhere in this publication, there are likely limits on how high major central banks are likely to allow yields to go.

Q What are the investment implications of HK's recent policy address?

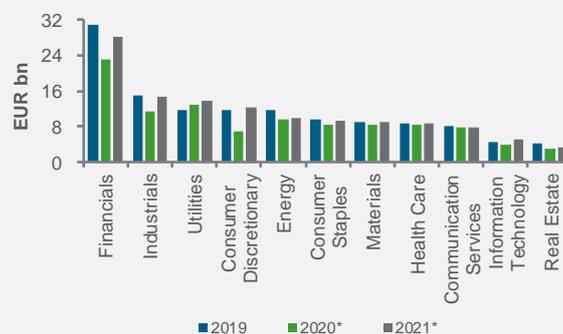

Hong Kong Chief Executive Carrie Lam delivered her fourth policy address with a focus on Hong Kong's property market, its integration into the Greater Bay Area and its financing role in the region.

Lam announced a stamp duty cut for commercial properties and reiterated the importance of the Lantau Tomorrow Vision project to secure land supply for housing developments. Although there were no surprises for the housing sector, the stamp duty removal for commercial properties could support individual business owners and small and medium-sized enterprises that rely on borrowings on their commercial asset collaterals. A positive surprise was the government's policy to develop Hong Kong as a vibrant REIT market via consideration of measures such as relaxing the investment restrictions on REITs. This is constructive for the REITs sector and could help broaden investment options for income assets.

Lam also announced measures to enhance Hong Kong's financing role in the region, including implementation of the cross-boundary Wealth Connect Scheme, inclusion of nascent biotech companies listed in Hong Kong and the Mainland Sci-Tech Innovation Board in the Stock Connect Scheme, and promotion of REITs, private equity funds and family offices. We believe these measures could further foster Hong Kong's role as a major financial centre in the region.

A resumption of dividend payments would be key for sustained outperformance of Euro area financials

Top client questions (cont'd)

Q What are the implications of upcoming fiscal and monetary policies on bond yields?

The possibility of former Fed chairperson Janet Yellen taking over as the new Treasury secretary reignited hopes of a fiscal stimulus in the US in early 2021, supporting market sentiment. However, higher spending also likely means a higher deficit which, in turn, may lead to higher Treasury bond supply pressures. While the scale of the fiscal stimulus is currently unknown, a larger-than-expected plan could raise upward pressure on Treasury bond yields, and vice versa. Yellen will also reportedly need Congressional approval to use USD 455bn of unused funds the Trump administration is taking back from the Fed's unused pandemic lending programmes.

On the monetary front, both the Fed and ECB meetings in December are likely to be important. While the ECB has already indicated it would consider easing policy at its next meeting, it is yet unclear if the Fed will leave policy unchanged or choose to ease pre-emptively following uncertainty over the likely size and timing of any US fiscal stimulus.

A new round of fiscal policy could push bond yields higher, but given Fed commitments and its average inflation targeting framework, we believe it will ultimately act to cap any rise in yields. We continue to prefer credit (EM USD, Asia USD and DM HY bonds, in particular) over government bonds as we expect them to be the biggest ultimate beneficiaries of Fed efforts to cap any sharp rise in yields.

Q Is the USD set to break lower?

The broad USD index (DXY) has slipped towards its August-low as the US election outcome and vaccine news supported risk sentiment. The market has shown little concern thus far that short-USD positioning might trigger a short, sharp USD rally as we enter more illiquid year-end markets and our proprietary market diversity models show little signs of concern.

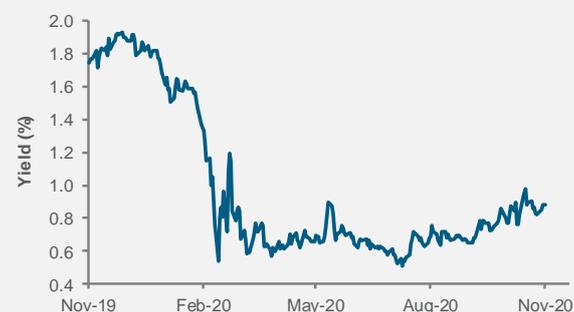

EUR/USD is pushing towards important technical resistance around 1.20 and AUD/USD is approaching its 2020 high at 0.7415. NZD/USD has just traded to a new high above 0.70, and the buoyant GBP/USD is currently marching towards 1.34 and the important 1.35 resistance level. The coming days could provide a series of technical triggers to suggest that the USD downtrend may be off to a flying start.

Event risks and illiquid markets remain a concern for investors, but as we have witnessed on several occasions in this unique year, markets have become more comfortable with "looking through" short-term risks to focus on the larger trends. Long-term investors, who may be anticipating a secular USD trend reversal, could be providing steady selling pressure on the USD as they hedge currency exposure, or reallocate capital away from US assets. We believe volatility can rise, and key technical levels could be broken through year-end.

Sustained breaks of resistance in EUR/USD (1.20-1.21), GBP/USD (1.35-1.36) and AUD/USD (0.74-0.75) would indicate the next leg of the USD decline is near. However, a failure to break could leave the USD vulnerable to an uncomfortable short-squeeze rally. We believe year-end, in particular, would be a time to tread carefully given risks presented by low liquidity.

Although US Treasury yields have risen from record lows, we expect the Fed to cap further significant gains

Top client questions (cont'd)

Q Is it time to reduce exposure to gold?

The rising likelihood of a global economic growth recovery on the back of increasing prospects of a COVID-19 vaccine rollout and broad rally in risk assets have taken some shine off gold recently. The move lower in gold has been exacerbated by an accelerated liquidation of exchange-traded gold exposure. We note the outflows observed in gold contrast with inflows into several cryptocurrencies, such as Bitcoin. Positioning data also shows tactical investors have scaled back in gold.

In our assessment, the structural uptrend for gold remains intact. While we acknowledge the possibility of a continued rotation out of gold-backed ETFs in the near term, we believe the rebound in real yields is unlikely to be sustained as long as the Fed caps any sharp rise in bond yields. A weaker USD is also a supportive factor, in our view, and gold remains an attractive portfolio diversifier.

On technical charts, gold is currently hovering above the 200-day moving average. Next key support is expected at around 1,750-60.

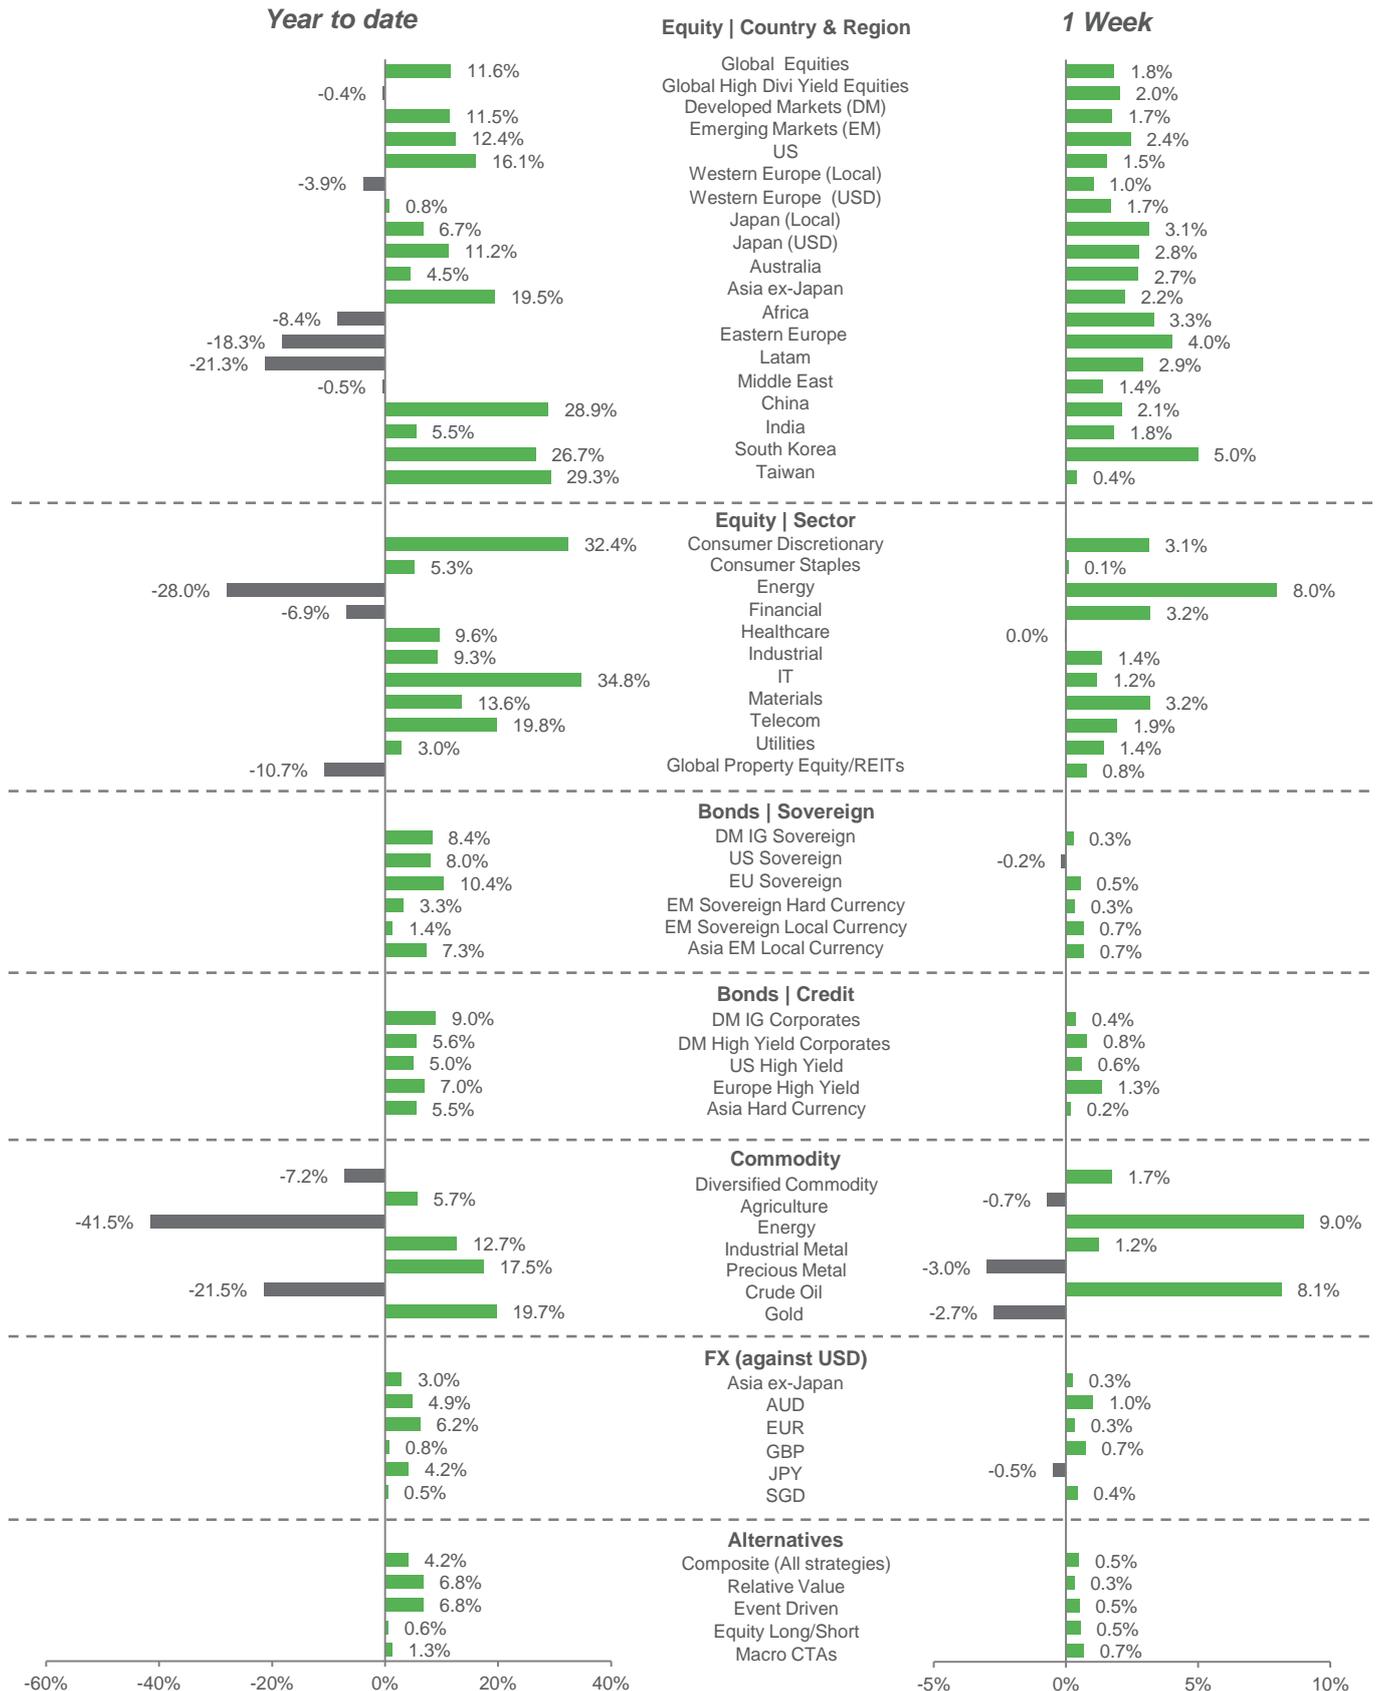

Gold is testing the 200-day moving average; next major support is around USD 1,750/oz

In relation to any collective investment schemes referred to in this document, this document is for general information purposes only and is not an offering document or prospectus (as defined in the SFA). This document is not, nor is it intended to be (i) an offer or solicitation of an offer to buy or sell any capital markets product; or (ii) an advertisement of an offer or intended offer of any capital markets product. **Deposit Insurance Scheme:** Singapore dollar deposits of non-bank depositors are insured by the Singapore Deposit Insurance Corporation, for up to S\$75,000 in aggregate per depositor per Scheme member by law. Foreign currency deposits, dual currency investments, structured deposits and other investment products are not insured. **Taiwan:** Standard Chartered Bank (“SCB”) or Standard Chartered Bank (Taiwan) Limited (“SCB (Taiwan)”) may be involved in the financial instruments contained herein or other related financial instruments. The author of this document may have discussed the information contained herein with other employees or agents of SCB or SCB (Taiwan). The author and the above-mentioned employees of SCB or SCB (Taiwan) may have taken related actions in respect of the information involved (including communication with customers of SCB or SCB (Taiwan) as to the information contained herein). The opinions contained in this document may change, or differ from the opinions of employees of SCB or SCB (Taiwan). SCB and SCB (Taiwan) will not provide any notice of any changes to or differences between the above-mentioned opinions. This document may cover companies with which SCB or SCB (Taiwan) seeks to do business at times and issuers of financial instruments. Therefore, investors should understand that the information contained herein may serve as specific purposes as a result of conflict of interests of SCB or SCB (Taiwan). SCB, SCB (Taiwan), the employees (including those who have discussions with the author) or customers of SCB or SCB (Taiwan) may have an interest in the products, related financial instruments or related derivative financial products contained herein; invest in those products at various prices and on different market conditions; have different or conflicting interests in those products. The potential impacts include market makers’ related activities, such as dealing, investment, acting as agents, or performing financial or consulting services in relation to any of the products referred to in this document. **UAE:** DIFC - Standard Chartered Bank is incorporated in England with limited liability by Royal Charter 1853 Reference Number ZC18.
